

How to determine the track of the current CD

Here's an easy way to do it: create a timer and put this code in the *OnTimer* event:

```
var
  Trk, Min, Sec: Word;
begin
  with MediaPlayer1 do
    begin
      Trk := MCI_TMSF_TRACK(Position);
      Min := MCI_TMSF_MINUTE(Position);
      Sec := MCI_TMSF_SECOND(Position);
      Label1.Caption := Format('%.2d', [Trk]);
      Label2.Caption := Format('%.2d:%.2d', [Min, Sec]);
    end;
  end;
```

Add *MMSystem* to the uses clause of the unit. The code will show the current track and time.
