

How to copy data between TWebBrowsers

If you ever wondered how to copy documents from one *TWebBrowser* just use this code. Using the *Navigate()* function is just a waste of time and not always will give you them same result (if a webpage changed in the meantime).

```
var
  Body1, Body2: IHTMLElement;
...
Body1 := IHTMLDocument2(WebBrowser1.Document).Body;
Body2 := IHTMLDocument2(WebBrowser2.Document).Body;
Body2.OuterHtml := Body1.OuterHtml;
```
