

Display the Browse for Folder dialog box

Use the following routine to display the Windows "Browse for Folder" dialog box.

```
function FindFolder(Handle: THandle;  
    Title: string = 'Please specify a folder'): string;  
var  
    lpItemID: PItemIDList;  
    BrowseInfo: TBrowseInfo;  
    DisplayName: array[0..MAX_PATH] of char;  
    TempPath: array[0..MAX_PATH] of char;  
begin  
    Result := '';  
    FillChar(BrowseInfo, sizeof(TBrowseInfo), #0);  
    BrowseInfo.hwndOwner := Handle;  
    BrowseInfo.pszDisplayName := @DisplayName;  
    BrowseInfo.lpszTitle := PChar(Title);  
    BrowseInfo.ulFlags := BIF_RETURNONLYFSDIRS;  
    lpItemID := SHBrowseForFolder(BrowseInfo);  
    if lpItemID <> nil then  
        begin  
            SHGetPathFromIDList(lpItemID, TempPath);  
            Result := TempPath;  
            GlobalFreePtr(lpItemID);  
        end;  
    end;  
end;
```

You will need to use the Windows and ShlObj units to get the code to compile.
