

How to detect text and font size changes

When creating components you may want to know when the user changed the font or text. This can be quite easily done using the *CM_FONTCHANGED* and *CM_TEXTCHANGED* messages.

```
type
...
TComponent1 = class(TComponent)
private
...
    procedure CMFontChanged(var Message: TMessage); message CM_FONTCHANGED;
    procedure CMTextChanged(var Message: TMessage); message CM_TEXTCHANGED;
...
end;

procedure TComponent1.CMTextChanged(var Message: TMessage);
begin
...
end;
procedure TComponent1.CMFontChanged(var Message: TMessage);
begin
...
end;
```
