

How to print text and text files in Delphi

This code how to print text and text files. This is the simplest way to print without using any external functions. All you have to do is open the LPT1 port (this is the default printer port) as if it where a file.

This code can be easily ported to Turbo Pascal (just change the function and variable type names).

```
var
    fPrinter: TextFile;
begin
    AssignFile(fPrinter, 'LPT1');
    Rewrite(fPrinter);
    { Write your printing code here. For files you may want to use a "for"
      or "while not Eof(fPrinter)" statement.
      Example: WriteLn(fPrinter, 'The text you want to print.');
```

```
    }
    CloseFile(fPrinter);
end;
```
