

Message box that works with a Delphi Service Application

Here is a message box that you can display from service applications. Change *MB_OK* to alter the buttons that appear. If you want the return value from *MessageBoxEx* change *PopServiceBox* into a function.

```
procedure PopServiceBox(Title, Text: string);
begin
  MessageBoxEx(
    0, PChar(Text), PChar(Title),
    MB_OK or MB_TOPMOST or MB_SERVICE_NOTIFICATION, 0
  );
end;
```
