

How to create a TTreeView without scrollbars

QUESTION

I want to use a *TreeView* (with more visible items than its window can show), but I don't need its scrollbars. How to do that?

Derive a new control from *TTreeView* and override its *CreateParams* method like this:

```
uses
  CommCtrl;

procedure TNoScrollbarsTreeview.CreateParams(var Params: TCreateParams);
begin
  inherited;
  Params.style := Params.style or TVS_NOSCROLL;
end;
```
