

# How to disable form movement using the mouse

---

This is how to prevent a form from being moved using the mouse.

```
type
  TForm1 = class(TForm)
  private
    { Private declarations }
    procedure WMNCHitTest(var Message: TWMNCHitTest); message WM_NCHITTEST;
  end;

procedure TForm1.WMNCHitTest(var Message: TWMNCHitTest);
begin
  inherited;
  with Message do
    if Result = HTCAPTION then
      Result := 0;
  end;
```
