

Find the position of the text cursor in a memo control

To determine the position of the cursor in a memo you should use messages, like in the example below.

```
var
    Row, Col: Integer;
begin
    Row := SendMessage(Memo1.Handle, EM_LINEFROMCHAR, Memo1.SelStart, 0);
    Col := Memo1.SelStart - SendMessage(Memo1.Handle, EM_LINEINDEX, Row, 0);
    Label1.caption := 'Row= ' + IntToStr(Row+1) + ' Col= ' + IntToStr(Col+1);
end;
```

The *MemoCursorPos* routine from the *Code Snippets Database* uses the code presented in this tip.
