

Search for help

Looking for a way to open your application's help file to it's search window? All you have to do is pass the name (and the path) of your help file and the string you want to search for to the following *HelpSearch()* function:

```
procedure HelpSearch(sHelpFName, sSearchKey: string);  
var  
    pc: PChar;  
begin  
    Application.HelpFile := sHelpFName;  
    pc := StrAlloc(Length(sSearchKey) + 1);  
    StrPCopy(pc, sSearchKey);  
    Application.HelpCommand(HELP_PARTIALKEY, LongInt(pc));  
    StrDispose(pc);  
end;
```

For example:

```
HelpSearch('DELPHI.HLP', 'colors');
```

If you just want to open the "search" window without specifying a search string:

```
HelpSearch('DELPHI.HLP', '');
```
