Programatically log users off

You may be thinking how can I use this procedure. Well I used it in a program where I could send commands to a remote machine.

```
procedure LogOff;
begin
  ExitWindowsEx(EWX_LOGOFF, 0);
end;
```

Note

No "reason" code was passed to the second parameter of the *ExitWindowsEx* function. This is not recommended by Microsoft – See the *MSDN entry* for *ExitWindowsEx*.
