Change the Delphi Object Inspector font size

I came upon this code below and thought it might be useful to others whose eyes are getting older. It makes the Object inspector font size increase to whatever suits.

It works great and the messagebox can be dispensed with.

```pascal
unit AdjustOIFont;

interface

procedure Register;

implementation

uses
  Windows, Classes, Graphics, Controls, Forms;

procedure Register;
var
  I: Integer;
begin
  for I := 0 to Screen.CustomFormCount - 1 do
    if Screen.CustomForms[I].Name = 'PropertyInspector' then
    begin
      Screen.CustomForms[I].Font.Size := 14; // or whatever you prefer
      // Remove MessageBox once this works OK.
      MessageBox(0, 'Adjusted Object Inspector font', 'Debug', MB_OK);
      Exit;
    end;
end;

end.
```
