How to read the installed ADO version

With different versions of MDAC available it is sometimes good to check whether the latest version is installed to make sure everything works fine. The following function returns the installed ADO version.

```
uses
  ComObj;
function GetADOVersion: Double;
var
  ADO: OLEVariant;
begin
  try
    ADO := CreateOLEObject('adodb.connection');
    Result := StrToFloat(ADO.Version);
    ADO := null;
  except
    Result := 0.0;
  end;
end;
```
